

Minnesota Pollution Control Agency

June 23, 1995

To Whom It May Concern:

As an official of the Minnesota Pollution Control Agency, Brainerd Regional Office, I am charged with the duty of inspecting the East Central Solid Waste Facility which is operated by Micro Life USA, Inc. Micro Life has been composting municipal solid waste and animal manure at this facility since October, 1994. Thus far I have had no problems with Micro Life's operations. They have maintained the site neatly. I have received no complaints of odor from the community. I have notice no objectionable odors during inspections. To date they have been very good operators.

If you need any additional information concerning Micro Life's performance, I recommend that you contact Mr. Doug Sell, Executive Director of the East Central Solid Waste Commission. The Commission owns the East Central Solid waste Facility which they lease to Micro Life.

Sincerely,

Peter M. Dinndorf
Regional Specialist
